

The skin
over your
Penis (Dick)
is too
tight.

This can cause problems with
urinating (peeing)

After the operation your penis will be sore for a few days

It can also cause infections around the penis (Dick)

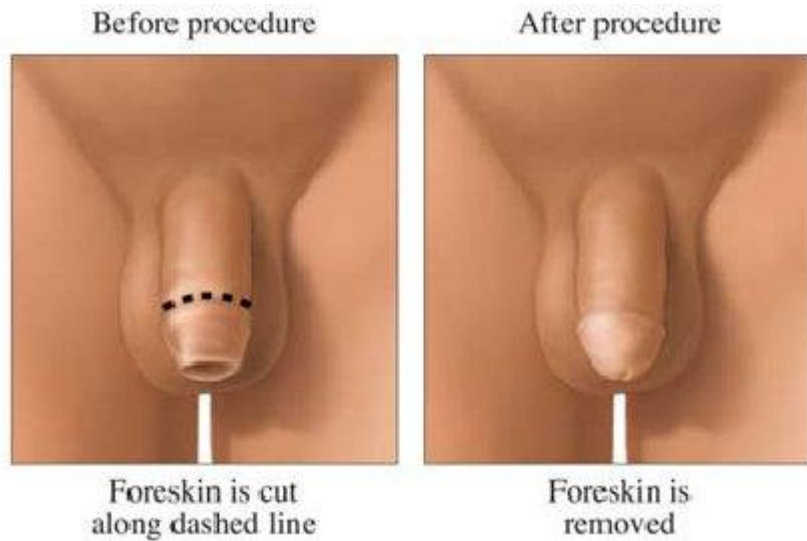

This may cause you pain

The doctor wants you to have an operation.

They would cut off some of the skin around your penis (Dick)

This should stop infections in the future

You will be asleep during the Operation.

This means you will not be able to feel anything that is happening and you wont feel pain.
