

The skin around your Penis (Dick)
is tight

The pain can usually be
managed with pain killers (tablets)

After the operation your penis (dick) will be sore. This will last for a few days.

This can cause infections, and can cause pain

You will need to limit your walking or exercise for a few days

It may also cause problems with peeing

The doctor has suggested That you have an operation to Treat this problem

The doctor wants to remove the tight skin from your Penis (Dick)

Before procedure

Foreskin is cut along dashed line

After procedure

Foreskin is removed

If you do not have the operation you will probably continue to get infections

You will be asleep during the operation. This means you will not feel what is happening
